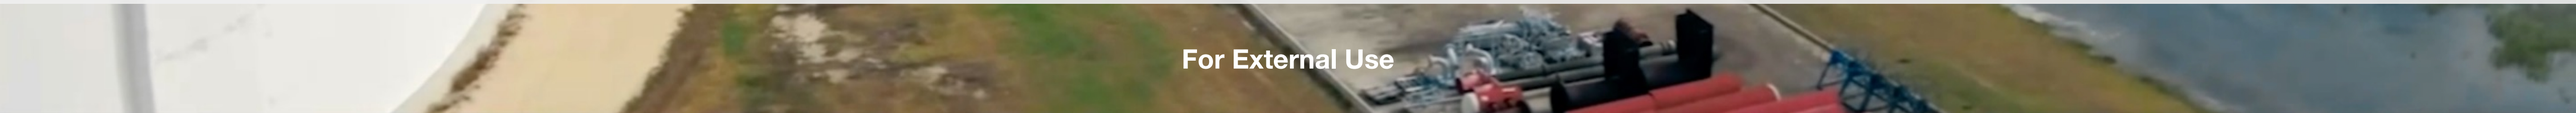
Golden Pass LNG

From Concept to Commercial Operations

October 13, 2022



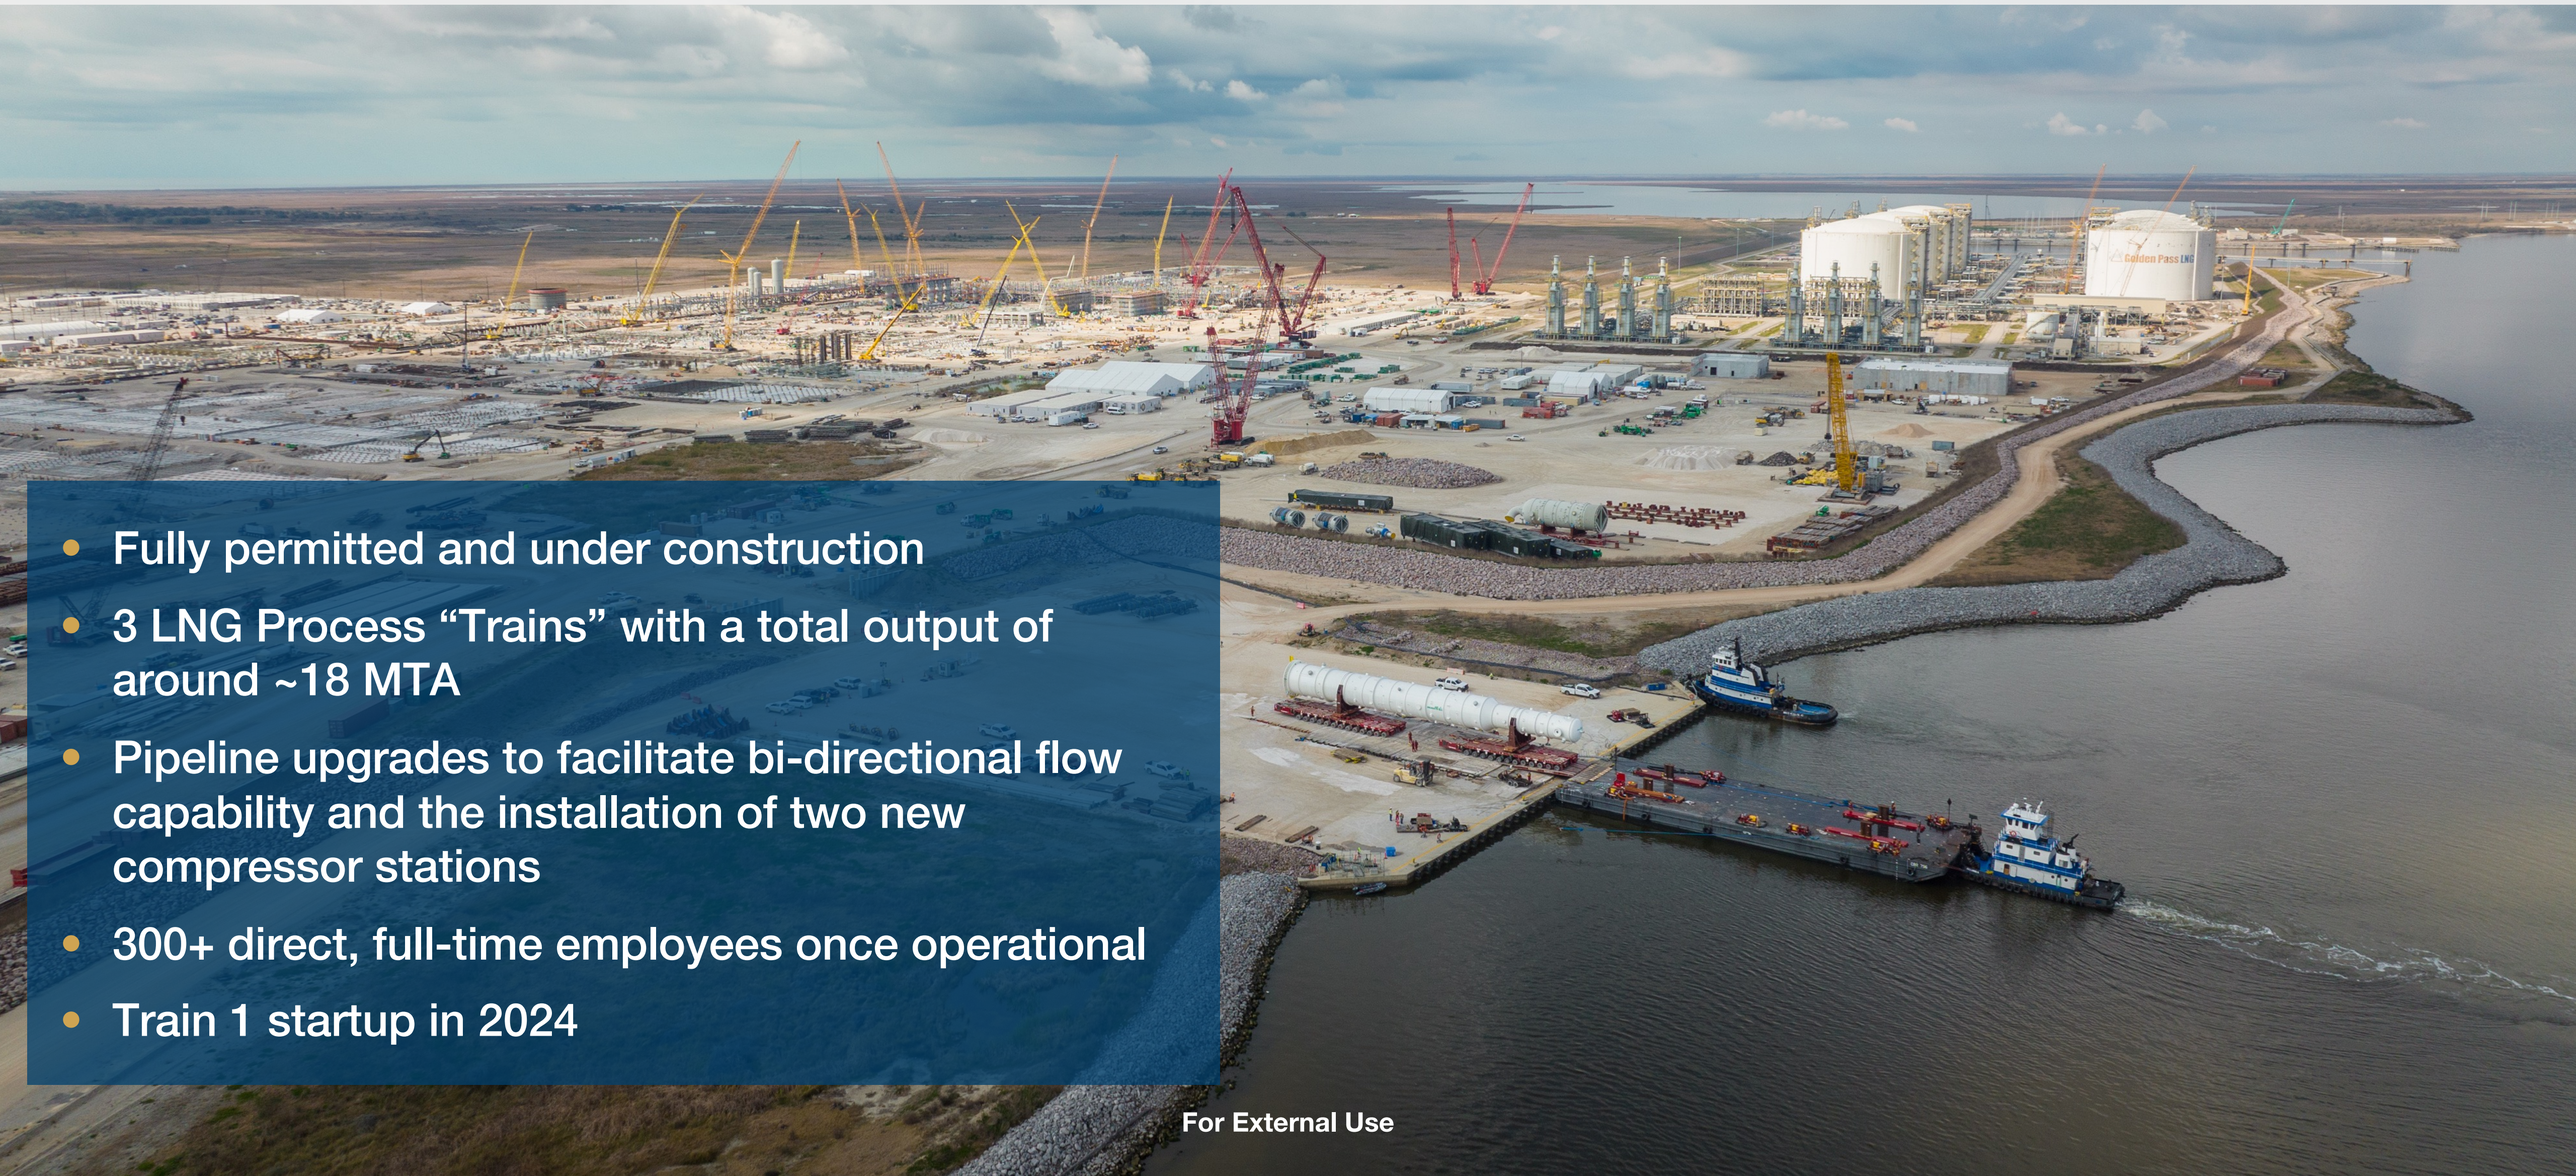
For External Use

Existing world-class LNG import terminal

- Strategic location on US Gulf Coast
- Crossroads of gas supply and transportation
- Over $2B invested at this location
- Most energy efficient plant on USGC
- 69-mile (111 kilometers) pipeline with key interconnects to the grid
- 5 full containment storage tanks
- 2 marine berths capable of handling the largest class LNG vessel

For External Use

Golden Pass LNG Export Project



- Fully permitted and under construction
- 3 LNG Process “Trains” with a total output of around ~18 MTA
- Pipeline upgrades to facilitate bi-directional flow capability and the installation of two new compressor stations
- 300+ direct, full-time employees once operational
- Train 1 startup in 2024

For External Use

Three points

- Building an LNG facility isn’t easy
- There are numerous players involved throughout the LNG value chain that impact success
- Maintaining focus is critical for navigating uncertainty

For External Use

This isn’t easy…

Numerous players throughout LNG value chain impact success

For External Use

Navigating Uncertainty
